The method proposed by N. E. Zhukovskii for the
graphical construction of a force triangle, the sides of
which are the coefficients of weight C_w , total aerody-
namic force C_D , and required thrust C_T , is modified and
made suitable for use for supersonic speeds. To illus-
trate the great potentiality of the graphical method of
calculation it is shown to be adaptable to the calculation
of unsteady motion of an aircraft.

DESCRIPTORS: *Stars, *Optical images, *Telescopes, Optical properties, Atmospheric refraction, Light transmission, Vibration, Astrophysics.

An analysis is made of observations of the amplitudes of vibrations of star images at different zenith distances to determine where the sources of these vibrations are localized in the atmosphere. Various observation methods are discussed and the data resulting from these observations are presented in table form.
